FOX/Sunday, 1 p.m. ET

Have you ever wondered how race teams organize their information? Where do they store the "notes" regarding setups for each individual track? What if they have more than one driver, each of whom has different components for their setup? Where do they house the timing and scoring information? The goal of any driver, be it a powerhouse NASCAR team or the small time operations hitting the local tracks, is to win. Organizational skills are paramount given the variables racing presents.

Different teams have different methods of storing their information. With the computer age becoming more important, especially in the racing industry, it can certainly be the perfect way to manage the massive amounts of information compiled for all types of racing. From go-karts to NASCAR, Race Driver Pro v3.5 management software produces an affordable, user-friendly way to house information compiled by drivers involved in many forms of racing.

LanSharks, based out of Irvine, CA is the leading developer of motorsports event and driver management software. Recognizing the unique needs of organization and management of information in motorsports, Race Driver Pro v3.5 was created to address most situations drivers or multi car teams face.

Among the great features of the program, Race Driver Pro is capable of storing all driving session data, including practice times, qualifying, testing for single or multi car teams, and is even capable of comparing each session.

Race Driver Pro is capable of interfacing with lap times from MyChron, MoTeC, Intercomp and Hot Lap timing systems. In addition, tire temperatures, tire pressures, oil and water pressures, gearing and shock/spring settings can be recorded within the program.

And, what about those dreaded days where you just can't seem

to hit on the proper setup? You've made wholesale changes to no avail? Race Driver Pro even contains a handling wizard, which will allow the driver or team to indicate the handling problem with the car. The handling wizard can then respond with recommended changes that could improve driver and car performance.

Trying to estimate the cost of re-visiting a track? Can't remember the accommodating hotel you stayed in during your last visit? No problem. Race Driver Pro even records all your financial data, including hotels, tow gas, race gas, entry fees, dinners, engines and hotel information, all on an race by race basis.

As you can see, Race Driver Pro has just about covered all the bases needed for single and multi car operations. Its user-friendly features allow just about any team, local or professional, to customize the needed information and maximize the efforts of their operation.

Given the value of this program, another great feature is its affordability. Race Driver Pro v3.5 is available at an introductory price of just 199.00. Prospective clients can order directly from the company, or visit one of their over 150 distributor sites and download the program for use.

For more information on this great program as well as others offered by LanSharks, please visit their [website](#).
